Correct design for every business

Form Identity

Brand Guidelines

Version 1.0

The mission

To give every small business the visual foundation they deserve — correct, coherent, and affordable. What makes a business unique should be seen.

Brand Type: ICLD — The Expert

Inward energy. Concrete deliverables. Logic-driven decisions. Defined structure. Form Identity communicates through depth and precision — not volume. The work speaks before the brand does.

One sentence

“Correct design for every business.”

02 LOGO

Wordmark

The Form Identity mark is the name set in Inter weight 300. Nothing is added. The name carries the weight.

A rectangular box with a light beige background. The text "Form Identity" is centered within the box in a dark blue, sans-serif font.

Form Identity

Primary lockup — Inter 300 on Warm White

A solid dark blue rectangular box. The text "Form Identity" is centered within the box in a white, sans-serif font.

Form Identity

Reversed lockup — Warm White on Primary

Clear space = cap height on all sides • Minimum: 16px digital / 6mm print

02 LOGO CONT.

Form Identity

Compact – minimum 16px

FORM IDENTITY

Correct design for every business

With tagline

DO

Use on Warm White or Primary backgrounds only

Maintain minimum clear space on all sides

Minimum size: 16px digital / 6mm print

DON'T

Never stretch or distort the wordmark

Never use on patterned or photographic backgrounds

Never add effects – shadow, outline, or gradient

Never use in any colour except Primary or Warm White

03 COLOUR

Primary colour

#1A2744

WCAG 13.24:1 • CMYK $\Delta E \leq 3.2$

One primary colour per brand. Derived from Brand Type scoring. Pre-validated for print and screen.

TINTS

#1A2744
Full

#465065
80%

#727886
60%

#9DA1A8
40%

#C9C9C9
20%

#DFDED9
10%

Accent colour

Accent #441A27

The accent is derived algorithmically: 120° HSL rotation from the primary, corrected using the Albers light intensity test. One use per composition. This is the Bezold Rule: a second accent colour transforms every other colour in the composition.

FIXED NEUTRALS – SAME FOR EVERY FORM IDENTITY BRAND

Ink
#1A1A18

Charcoal
#3D3D3A

Stone
#8C8880

Parchment
#E0DBD0

Warm White
#F5F2EA

These five neutrals are fixed. Every Form Identity brand receives the same neutral stack. The ground never changes – only the primary.

Type scale

Inter (Lato) — sans-serif. EB Garamond (Lora) — serif. Scale ratio $\times 1.414 (\sqrt{2})$

BRAND IDENTITY SYSTEM

11px · 500 · +0.12em

Form.

64px · 300 · 1.05

Your character made visible.

45px · 400 · 1.10

A system of correct decisions.

32px · 400 · 1.20

Every element has a reason.

22px · 500 · 1.30

Good design is not art. It is grammar — a re

16px · 400 · 1.60

Form Identity · Brand System v1.0

11px · 400 · 1.50

Rules

Rule 700

Weight 700 is permitted exactly once per composition as an inline accent. Never on headings. If everything is bold, nothing is.

Overline rule

Overline is always uppercase with tracking +0.12em. It directs attention toward the headline. It never competes with it.

Serif H3 rule

EB Garamond H3 uses italic, not weight 500. The italic is structurally distinct from the upright. Weight 500 in Garamond is heavier than needed.

Scale rule

Use only sizes from the 7-level scale: 11, 16, 17, 22, 32, 45, 64px. Intermediate sizes are not permitted. The scale is the system.

TYPEFACE PAIRING

Form Identity

Lato Light — structure, precision, all digital

Form Identity

Lora Italic — warmth, editorial, long-form print

05 GRID

The Müller-Brockmann formula

Type precedes grid. Body size determines line height.

Line height determines field height. Field height determines everything else. The margins are whatever remains after the arithmetic is exact.

Column gutter = body type size (12px)

Row gutter = 1 × line height (19px)

Field height = N × line height → 6 × 19 = 121px

Type area = frame – margins

Bottom margin = frame – top – (rows × field) – (gutters × row gutter)

A4 SPECIFICATION

Frame: 595 × 842px

Columns: 4

Rows: 5

Col gutter: 12px

Row gutter: 19px

Field height: 121px

Margins: T91 / B70 / L57 / R57

05 GRID CONT.

Type area: $481 \times 681\text{px}$ · 4 columns $\times$ 5 fields

Every element occupies whole fields — never partial ones. The grid is not a suggestion. It is the only dimension that exists.

06 APPLICATIONS – LETTERHEAD

A4 Letterhead – 595×842px

Form Identity	formidentity.com hello@formidentity.com
Re: Brand identity consultation	
Dear [Client name],	
Thank you for choosing Form Identity. This letter confirms your brand specification.
